

Transcript Supplement Report by Student

Student Code: ST10389916

Qualification Code: DISD0601 Qualification Name: Diploma in Information Technology in Software Development

Qualification Faculty: Faculty of Information and Communications Technology

NQF Level: NQF 6

SAQA Code: 74651

Qualification Credits: 360

Module Code	Module Name	Module Purpose	Module NQF Level	Module Credit
ADDB6311	Advanced Databases	The purpose of this module is to advance and develop your applied skills in database design and implementation within a commercial database management system	NQF Level 6	15
APPR6312	Applied Programming	This module will present students with the opportunity to create various solutions using their knowledge from programming, databases, web development and project management. This will develop students' ability to apply techniques and practices presented within the programming framework to produce complete applications.	NQF Level 6	15
BUIS5111	Business Information Systems	The purpose of this module is to provide students with a sound knowledge of concepts related to the components, development and types of information systems and to the strategic importance of information systems in gaining competitive advantage. This module will also develop the students' ability to apply the knowledge gained to a given scenario in the context of business information systems.	NQF Level 5	15
DATA6211	Database (Introduction)	The purpose of this module is to provide students with the knowledge and applied skills necessary for the design, implementation and management of database systems.	NQF Level 6	15
DATA6222	Database (Intermediate)	The purpose of this module is to manage, manipulate and implement a database.	NQF Level 6	15
HCIN6222	Human Computer Interaction	The purpose of this module is to provide students with the knowledge and understanding of the interaction between users and computers. Students should be able to apply the knowledge to improve the design of interfaces, taking the Human Computer Interaction concepts such as design principles, requirements, methodologies and interaction into consideration.	NQF Level 6	15
IPMA6212	IT Project Management	The purpose of this module is to provide the student with the knowledge and skills required to effectively apply the Project Management Body of Knowledge elements in planning, organising, controlling and leading Information Technology projects integrated solutions in an organisation	NQF Level 6	15
IQT5111	Introduction to Quantitative Thinking and Techniques	This module develops new ways of thinking about basic mathematics and the ideas and concepts that it represents. This is done in the current context of information-based decision-making and data analytics.	NQF Level 5	15
ISEC6321	Information Security	The purpose of the module is to provide students with the foundational knowledge, principles and best practices of information security. Students learn to use the tools and technologies to effectively manage data, information and applications security strategy in a computing environment.	NQF Level 6	15
ITPP5112	IT Professional Practice	This module provides a practical and theoretical foundation in developing the skills required as a Professional IT graduate in the workplace.	NQF Level 5	15

Transcript Supplement Report by Student

OPSC6311	Open Source Coding (Introduction)	The purpose of this module is to introduce students to open source software development for mobile devices.	NQF Level 6	15
OPSC6312	Open Source Coding (Intermediate)	The purpose of this module is to provide students further knowledge in well-designed; well coded; and business oriented open source software development for mobile devices.	NQF Level 6	15
OPSY5121	Operating Systems 1A	The purpose of this module is to provide an overview of the theoretical concepts and core mechanisms of various operating systems, including, the management of the processor, processes, systems memory, and system's file and device strategy. Students will learn the essential skills needed to adequately manage, troubleshoot, maintain and administer various operating systems and applications, securely and ethically following best practices.	NQF Level 5	15
PRLD5121	Programming Logic and Design	The purpose of this module is to provide students with foundational and practical knowledge required for effective programming. Students learn the various programming concepts and approaches and then proceed to study more complex concepts and elements critical to a good understanding of programming methodology.	NQF Level 5	15
PROG5121	Programming 1A	The purpose of this module is to provide foundational knowledge that is applied in an object-oriented programming language.	NQF Level 5	15
PROG6112	Programming 1B	The purpose of this module is to augment the skills acquired in Programming 1A by providing students with knowledge of applets, object inheritance and class manipulation and with the skills needed to apply this knowledge to finding programming solutions.	NQF Level 6	15
PROG6212	Programming 2B	The purpose of this modules is to build on the skills and knowledge gained in Programming 2A and further develop applications through the addition of advanced OOP, GUI and database concepts. These skills aim to provide students with the ability to develop complete software solutions for given business requirements.	NQF Level 6	15
PROG6221	Programming 2A	The purpose of this module is to provide the students with an introduction to a multi-purpose object-oriented programming (OOP) computer programming language. Students are taught the language fundamentals as well as the more advanced OOP development features, An in-depth understanding of predefined structures, objects and classes as well as object oriented programming techniques are covered.	NQF Level 6	15
SAND6221	System Analysis and Design	The purpose of this module is to focus on the analysis of systems in business, with the objective to improve or enhance or evaluate such systems. The Systems Development Life Cycle (SDLC) and Object-Oriented principles form the basis of this module and students are taught to consider various important aspects of systems design in terms of requirements, static and dynamic modules, and user interfaces.	NQF Level 6	15
SQAT6322	Software Quality and Testing	The purpose of this module is to teach students the fundamental concepts of software quality and testing, using various testing approaches, methods and techniques that affect software quality.	NQF Level 6	15
WEDE5020	Web Development (Introduction)	The purpose of this module is to develop students' understanding of basic web development techniques using HTML and a web development software package to create desktop web applications and mobile websites	NQF Level 5	15
WEDE6021	Web Development (Intermediate)	The purpose of this module is to teach students to develop database driven websites using appropriate server side scripting and DBMS.	NQF Level 6	15
XISD5319	Work Integrated Learning 3A	The purpose of this module requires the students to integrate their acquired knowledge and skills to develop software applications that meet specific given business requirements for a given scenario	NQF Level 5	15
XISD6329	Work Integrated Learning 3B	The purpose of this module requires students to integrate their acquired knowledge and skills to develop software applications that meet specific given business requirements for a NPO/NGO.	NQF Level 6	15
